a tumour rejection antigen precursor (TRAP) having an amino acid sequence of a TRAP encoded by a fully defined MAGE-3, MAGE-B5, or MAGE-B6 polymucleotide sequence. Also disclosed is a method which is useful for determining presence of cytolytic T-cells specific for complexes of human leukcoyre antigen (HLA) and a peptide derived from the nucleic acid in a cytocoxic T-lymphocyte (CTL) containing sample. The nucleic acid is useful as a diagnostic probe to determine the presence of abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (tumour) cells such as seminoma, bladder transitional-cell carcinoma, head-and-neck squamous-cell carcinoma, breast carcinoma, sarcoma, cutaneous melanoma or nonsmall cell lung cancer (NSCLC) which express MAGE-C1, MAGE-B5 or MAGE-B6. The nucleic acid is useful for diagnosing a disorder characterised by expression of MAGE-C1, MAGE-B5 or MAGE-B6 TRAPs or tumour rejection antigens (TRAPs). The present sequence represents the coll a gene encoding the human tumour rejection antigen precursor, MAGE-C3, which is located on chromosome Xq27.1-Xq27.3.
                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid molecule which encodes
                                                                                                                                                                                                                                                      Novel isolated nucleic acid encoding tumor rejection antigen precursor MAGE-C3, MAGE-B5, or MAGE-B6, useful as diagnostic probes to determine presence of abnormal e.g., tumor cells expressing MAGE-C1, MAGE-B5 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1041 BP; 242 A; 283 C; 242 G; 274 T; 0 other;

The invention relates to isolated polynucleotide (I) and 

diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

Claim 1; SEQ ID No 24158; 103pp; English.

polypeptide (II) sequences (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymerlectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1) is useful in gene therapy techniques or restore normal activity of (II) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful in medical imaging of sites expressing full). (I) and (II) are useful in medical imaging of sites expressing full). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in capponshible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AASS4197-AASS4564 represent novel human configuration, but was obtained in electronic format directly from WIPO at the invipo.int/pub/published\_pct\_sequences.

3980 720 a tumour rejection antigen precursor (TRAP) having an amino acid sequence of a TRAP encoded by a fully defined MAGE-C3, MAGE-B5, or MAGE-B6 polynocleotide sequence. Also disclosed is a method which is useful for determining presence of cytolytic T-cells specific for complexes of human leukocyte antigen (HLA) and a peptide derived from the nucleic acid in a cytotoxic T-lymphocyte (CTL)-containing sample. The nucleic acid is a cytotoxic T-lymphocyte (CTL)-lontaining sample. The nucleic acid is tytotoxic T-lymphocyte as seminoma, badder transitional-cell carcinoma, head-and-neck squamous-cell carcinoma, breast carcinoma, sarcoma, cutanecus melanoma or nonsmall cell lung cancer (NSCLC) which express The invention relates to an isolated nucleic acid molecule which encodes TRAP; ss; tumour rejection antigen precursor; cytolytic T-cell; CTL; tumour; seminoma; bladder transitional-cell carcinoma; NSCLC; adaptor; head-and-neck squamous-cell carcinoma; breast carcinoma; sarcoma; cutaneous melanoma; nonsmall cell lung cancer; gene; MAGE-C2; human. MAGE-C3, MAGE-B5, or MAGE-B6, useful as diagnostic probes to determine presence of abnormal e.g., tumor cells expressing MAGE-C1, MAGE-B5 or 3921 GACAACCACTCCTATTTCTTTGAAGACACATTAGACCTCACCTATGAGGGAAGCCTGATT Novel isolated nucleic acid encoding tumor rejection antigen precursor GACAACCACTCCTATTTCTTTGAAGACACATTAGACCTCACCTATGAGGGAAGCCTGATT 3981 GATGACCAGGCATGCCCAAGAACTGTCTCCTGATTCTTATTCTCAGTATGATCT 4035 GATGACCAGGGCATGCCCAAGAACTGTCTCCTGATTCTTATTCTCAGTATGATCT cDNA encoding human tumour rejection antigen precursor, MAGE-C2. MAGE-C1, MAGE-B5 or MAGE-B6. The nucleic acid is useful for diagnosing a disorder characterised by expression of MAGE-C1, MAGE-B5 or MAGE-B6 TRAPS or tumour rejection antigens (TRAs). The present sequence represents cDNA encoding the human tumour rejection antigen precursor, MAGE-C2.
                                                                                                                                                                                                                             449

MAGE-C2 is a novel member of the MAGE family that may be recognised by cytocoxic T cells, leading to lysis of the tumour cells which express it.

MACE-C2 and MACE-C1 (see AAW81546) are expressed in a variety of tumours and in normal testis cells, but not by other normal cells. The MAGE-C2 gene was isolated from a melanoma LB373-MEL DNA by PCR using primers based on MAGE-C2 CDNA (see AAV69726). The MACE-C2 gene has been localised to Xq26-q27. It includes at least 2 introns. MACE-C2 and MAGE-C1 cDNAS (see AAV69720) are claimed, as are:

EXPRESSION vectors; transformed or transfected cell lines (e.g. COS and CHO); an isolated TRAP encoded by the cDNAS; a kit useful in a PCR based assay; a method for determining expression of a MACE-C1 or GAB assay; a method for determining a number of tumour rejection antigen derived from MAGE-C1 or MAGE-C2; and a polytope comprising at least one tumour rejection antigen. MAGE-C1 and MAGE-C2 and at least one other tumour rejection antigen.

MAGE-C1 and MAGE-C2 can be used in a method for determining the presence of cytolytic T cells specific for complexes of a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tumour rejection antigen precursors - used for determining preser of cytolytic T cells specific for complexes of a human leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MAGE-C2; human; tumour rejection antigen precursor; TRAP;

Sequence 2940 BP; 698 A; 710 C; 801 G; 731 T; 0 other;

on chromosome Xq26-Xq27

cutaneous melanoma or nonsmall cell lung cancer (NSCLC) which express MAGE-C1, MAGE-B5 or MAGE-B6. The nucleic acid is useful for diagnosing a disorder characterised by expression of MAGE-C1, MAGE-B5 or MAGE-B6 TRAPS or tumour rejection antigens (TRAs). The present sequence represents the human tumour rejection antigen precursor, MAGE-C2, gene which is located

The invention relates to an isolated nucleic acid molecule which encodes a tumour rejection antigen precursor (TRAP) having an amino acid sequence of a TRAP encoded by a fully defined MAGE-03, MAGE-B5, or MAGE-B6 polynucleotide sequence. Also disclosed is a method which is useful for determining presence of cytolytic T-cells specific for complexes of human leukocyte antigen (HLA) and a peptide derived from the nucleic acid in a cytotoxic T-lymphocyte (TLI)-containing sample. The nucleic acid is useful as a diagnostic probe to determine the presence of abnormal (tumour) cells such as seminoma, bladder transitional-cell carcinoma, malanna, and more all acidinoma, present exections, sarcons, which express

This mucleotide sequence encodes novel human tumour rejection antigen precursor (TRAP) MAGE-C2 (see AAW8154). MAGE-C2 is a novel member of the MAGE family that may be recognised by cytotoxic T cells, leading to lysis of the tumour cells which express it.

MACE-C2 and MACE-C1 (see AAW81546) are expressed in a variety of tumours and in normal testis cells, but not by other normal cells.

The MAGE-C2 DDNA was isolated from a melanoma LB373-MEL CDNA using a MAGE-C2 probe produced by PCR (see AAV69723-24). The MACE-C2 gene was also isolated (see AAV69727) and has been localised to Xq28-q27.

MACE-C2 and MACE-C1 CDNAs (see AAV69720) are claimed, as are:

CX man (CHO); an isolated TRAP encoded by the CDNAs; a kit useful in a PCR based assay; a method for determining expression of a MACE-C1 gene using the kit; a polyvope comprising a number of tumour rejection antigens derived from MAGE-C1 or MAGE-C2; and a polytope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        71; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tumour rejection antigen precursors - used for determining presence of cytolytic T cells specific for complexes of a human leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              comprising at least one tumour rejection antigen derived from AGAE-C1 vm AGAE-C2 and at least one other tumour rejection antigen. MACE-C1 and MACE-C2 can be used in a method for determining the presence of cytolytic T cells specific for complexes of a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  46.6%; Score 484.8; DB 20; Length 1983; 72.9%; Pred. The interior restates to a spatial procession in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label cound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on calls. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for capid production of functional information from genomic sequence. The present sequence data for this patent did not form part of the invention. Note: The sequence data for this patent did not form part of the compart of the printed specification, but was obtained in electronic format directly con mile form with a fire manner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            365 GTGCAGTTTCTTCTCTCAAATATCAAACAAAAGAGCCTGTCACAAAGGCAGAGATGCTG

                                                                                                                  736 CCCAAGAACTGTCTCCTGATTCTTATTCTCAGTATGATCTTCATAAAGGGCAGCTGTGTC 795
                                                                                                                                                                                                  Human; foetal liver; gene expression; single exon nucleic acid probe; ss.
                                                                                                                                                                       125 CCCAAGAACTGTCTCCTGATTCTTATTCTCAGTATGATCTTCATAAAGGGCAGCTGTGTC 66
                                                                                                                                                                                                                        The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                              The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosting, grading, staging, monitoring and prognosing diseases of the human heart and vascular system expression, the expression is a staging and prognosing diseases of the human heart and vascular system expression, cardiac arrhythmias and

                               The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Probe #4815 for gene expression analysis in human cervical cell sample.
                                                                                                                                                    CCCAAGAACTGTCTCCTGATTCTTCTTATTCTCAGATCTTCATAAAGGGCAGCTGTGTC
